Environment:	1. Chrome Browser(Version: 12233) 2. Windows 7		

Description

User is not able to renew the book which he/she has issued already and after adding more than 2 books in the Issue Book category the application is getting crashed again and again in the Library Management Software.

****Steps to reproduce****

1. User open the Library Management Software.
2. Input the valid credentials and login into the Software.
3. Select any book for issuing.
4. Apply for Issue.
5. Observe the result.

Expected Result: User Should easily select any book and apply for issuing. Also if user want then he/she can add successfully any book which he/she already issued. After that if User want than he/she can issue book more than 2 books successfully.

Actual Result: User can successfully issue any book but user cant able renew the same book again. User is not able to issue more than 2 books (the application getting crash again and again).
